Switch to Securi-Guard now and give your customers the service that you'd expect.

Formed in 1982, Securi-Guard has many years experience within the security industry.

Securi-Guard Monitoring operates an NSI Gold Approved Alarm Receiving Centre (ARC), using the latest technologies for the monitoring of alarms (including fire), CCTV, vehicles and lone/vulnerable workers. The accreditations for the ARC also include NSI Gold Approved Remote Video Response Centre (RVRC) and Thatcham Approved CAT5/NSI Gold Systems Operating Centre (SOC).

Securi-Guard Monitoring offers the latest in alarm monitoring technology, with a wide range of systems, including;

- All types of Redcare, including GSM, Classic and Secure
- All types of CSL Dualcom, including GSM and Gradeshift Dualcom
- Emizon 21, GPRS and PSTN signalling
- Digital Communicator, fast format, SIA and Contact ID
- Remote CCTV Monitoring for both BS 8418/and non BS 8418 systems
- Lone Worker Monitoring to BS 8484

Through our monitoring software we can provide remote access, using the Guard-Net system. This system allows our installers and their engineers to securely log in and manage their sites. Users are able to make keyholding changes, set up schedules, view areas and transmitters, check site logs, run reports and place systems on test without the need to pick up the phone.

We don't just monitor alarms and CCTV; we can monitor anything. For example, we can monitor gas detectors, pressure alarms, freezer/boiler temperatures etc. In fact we can monitor virtually any premises or any piece of equipment.

Additional to this we also provide monitoring for lone/vulnerable workers and satellite tracking systems.

For more information and to discuss your monitoring requirements and the services you are interested in please contact us on:
